

Marine Plywood

Discover
more

Produciamo, commercializziamo e placchiamo compensato marino di alta qualità. Tradizionalmente utilizzato per la costruzione di imbarcazioni, il compensato marino è apprezzato anche in altri settori come l'edilizia, l'arredamento e in tutte le applicazioni dove la resistenza all'acqua e all'umidità è essenziale. Gli stessi pannelli possono essere rivestiti con diverse finiture.

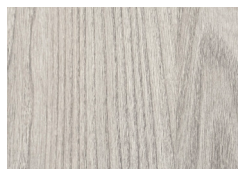

We produce and distribute high-quality marine plywood. Traditionally used in boat building, marine plywood is also valued in other fields such as construction, furniture, and generally wherever water and moisture resistance is a fundamental requirement. Panels can be coated with different finishes.

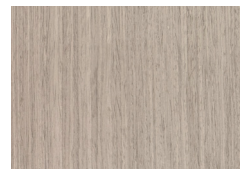

Mogano certificato RINA*
*RINA certified Mahogany**

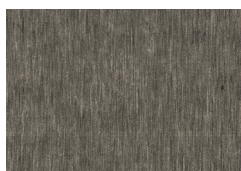

Okoumè certificato RINA
RINA certified Okoume

Okoumè placcato con laminato
HPL plywood

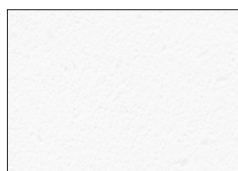

Okoumè placcato Alpi
Alpi veneered plywood

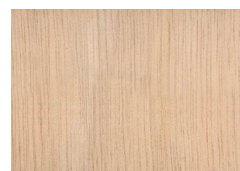

Okoumè placcato HPL
biruvido
Sanded HPL plywood

Okoumè impiallacciato rovere
Oak veneered plywood

Isopaper: Okoumè placcato con carta turapori
Isopaper: Okoume coated with ready-to-paint paper

Xiloflam: Okoumè certificato IMO-MED
Xiloflam: Okoume IMO-MED certified

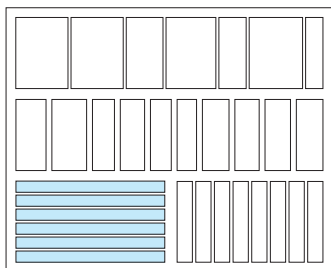

Classic boats

Per le carene e coperte delle imbarcazioni Riva e in generale delle barche classiche, si consiglia di utilizzare esclusivamente il Compensato Mogano omologato RINA in versione lamellare e superlamellare ad elevata stratificazione.

For the bottoms and decks of Riva and Classic Boats, it is recommended to use exclusively RINA certified Mahogany plywood in multi-layered and super-layered execution.

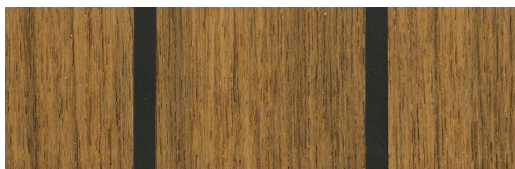

Decking Panels

more

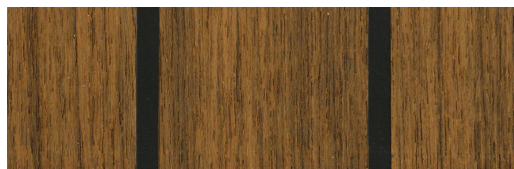

Finiture di pregio e praticità si incontrano nella nostra collezione di decking per uso nautico. I materiali sono accuratamente selezionati per soddisfare le aspettative dei cantieri navali più prestigiosi. I pannelli sono disponibili lisci, scanalati, gommati o filettati.

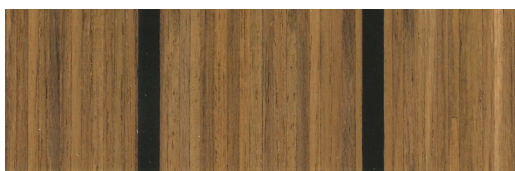

High-end finishes and utility converge in our nautical decking collection. The materials are meticulously selected to meet the expectations of the most prestigious shipyards. Panels are available smooth, grooved, with rubber inlay or wood inlay.

Choose your ultimate performance panels

Ignifughi / Fire-resistant

I pannelli con anime non combustibili sono ideali per le costruzioni che richiedono un'alta resistenza al fuoco e una significativa riduzione dell'opacità dei fumi in caso di incendio. Tutti i materiali utilizzati per questi pannelli sono certificati per uso navale secondo la Direttiva sull'Equipaggiamento Marittimo IMO-MED.

Panels with non-combustible cores are particularly suitable for constructions requiring high fire resistance and a significant reduction in smoke opacity in the event of a fire. All materials used are certified for marine use according to the Marine Equipment Directive (IMO-MED).

Alleggeriti / Lightweight

Con un'anima in PET, sughero o legno leggero, questi pannelli sandwich sono ottimali per ridurre il peso di strutture, rivestimenti e arredi, mantenendo elevate le proprietà meccaniche.

With a core in PET, cork, or lightweight wood, these sandwich panels are ideal for reducing the weight of structures, cladding, and furnishings while maintaining high mechanical properties.

Antivibranti / Anti-vibration

Sistemi compositi progettati per ridurre drasticamente la propagazione delle vibrazioni e il rumore tra gli ambienti interni delle imbarcazioni. Possono essere installati sia a parete che a pavimento.

Composite systems designed to drastically reduce the propagation of vibrations and noise between the interior environments of boats. They can be installed on both walls and floors.

Fonoisolanti / Soundproofing

Pannelli appositamente progettati per isolare e migliorare il comfort acustico degli ambienti. Sono realizzati accoppiando compensati marini a materiali che offrono il miglior rapporto tra potere fonoisolante e peso.

Panels specifically designed to insulate and enhance acoustic comfort in environments. They are constructed by combining marine plywood with materials that offer the best ratio of sound insulation power to weight.

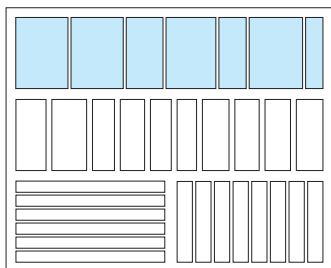

Coibentanti / Insulating

Utilizziamo i migliori materiali coibenti adatti alla nautica accoppiati ai compensati marini. L'isolamento termico offerto consente di aumentare il comfort all'interno degli ambienti di bordo.

We use the best insulating materials for boatbuilding applications combined with marine plywood. Thermal insulation improves the comfort of boat interiors.

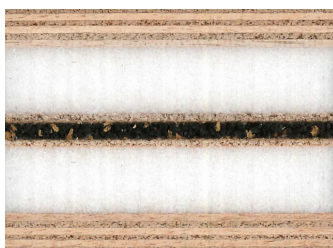

Sandwich Panels

Discover
more

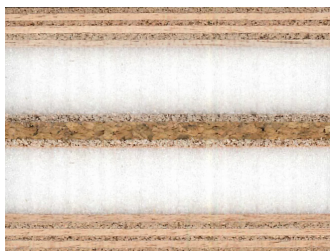

I nostri pannelli sandwich ridefiniscono il design, la realizzazione e le prestazioni degli yacht, dei superyacht e delle barche a vela moderne. I nostri prodotti affrontano le sfide più comuni nella progettazione e costruzione delle imbarcazioni: ridurre il peso, isolare acusticamente, migliorare il comfort e garantire la sicurezza a bordo.

Our sandwich panels redefine the design, construction, and performance of modern yachts, superyachts, and sailing boats. Our products address the most common challenges in boat design and construction: reducing weight, providing acoustic insulation, enhancing comfort, and ensuring safety on board.
